The 7th World Congress on Fluency Disorders:
• Represents a unique forum for practitioners, researchers, clinicians and people who stutter/clutter (PWS/C) to share new practices, knowledge, experiences and ideas
• Encourages us to explore stuttering and its subtypes in the light of new information that has emerged from recent research
• Enables us to assimilate and publish the latest research in the field
• Aims to generate discussion of the impact recent research has had and can have on diagnostic and assessment procedures, treatments and professional education

The scope of the conference will cover the following topics:
• Stuttering subtyping
• Cluttering and other fluency disorders
• New developments in neurophysiology and genetics
• Implications for clinical practice and treatment
• Therapies
• Phonetic and linguistic aspects of stuttering
• The emotional aspects of stuttering
